

CARING FOR BARIATRIC PATIENTS

## Bariatric room solutions

# Bariatric Room Solutions

Addressing the challenges of  
caring for bariatric patients

According to a 2016 report by the World Health Organisation (WHO) globally there are 650 million people that are obese – approximately 13% of the world's adult population.<sup>1</sup>

Caring for bariatric patients is a substantial and increasingly necessary challenge for today's healthcare providers. This is especially so in the hospital environment, where the increasing population of larger patients places considerable pressure on available resources.

Very often care facilities lack access to appropriate equipment, processes and training to deliver secure, comfortable and dignified care for this patient population. As a result, the practicalities of care provision can be very daunting for both patients and their caregivers.

Having timely access to the right products can help improve dignity and comfort for patients, while improving care processes and efficiency of caregivers.

## We help you:

Improve care efficiencies

Promote patient comfort and dignity

Respond to changing need with operational freedom

Our Bariatric Room Solutions ensure your healthcare facilities are equipped for the increasing challenges of bariatric patients and ready to deliver cost efficient and dignified patient care

### Patient Handling

Enable secure and comfortable transfers for bariatric patients and their caregivers

### Hygiene

Supporting comfort and dignity for the bariatric patient during hygiene care

### VTE prevention

Reduce the risk of venous thromboembolism with non invasive intermittent pneumatic compression (IPC)

## Bariatric Room Solutions

### Support surfaces and microclimate control

Enhance the care and protection of fragile skin with surfaces and microclimate control solutions for larger patients with compromised skin integrity

### Medical Beds

Provide a secure and dignified environment for bariatric patients up to 454 kg (1000 lb) in weight

### Training

Deliver ergonomic training programmes to help improve caregiver wellbeing\*

\* Training and consultancy offers may vary across regions. To find out more, visit [www.arjo.com/bariatric](http://www.arjo.com/bariatric)

# Patient dignity and caregiver efficiency

## Questions and concerns of patients and caregivers

### Improve caregiver efficiency

Caring for bariatric patients often requires the help of additional staff to ensure care tasks are completed but without appropriate equipment this can place caregivers and patients at increased risk of injury. These challenges can be addressed by providing caregivers with the right bariatric equipment in a timely manner.

Without the proper equipment, both caregivers and patients can be at risk of serious injury. Our range of bariatric handling equipment helps facilitate secure and efficient handling of the bariatric patient.

### Promote patient comfort and dignity

Bariatric patients may worry about whether their shape or size may inconvenience staff and other patients, or lead to care delays or equipment failure. This can make a healthcare facility stay extra stressful for bariatric people.

Everyday tasks such as visiting the toilet or getting in and out of bed can present difficulties for larger patients, especially if their usual levels of agility are debilitated by illness or the effects of surgery.

Providing easy access to bariatric equipment can increase comfort for both patient and caregiver.

## Our bariatric solutions

### Medical Beds

**Citadel® Plus**  
SWL\* 454 kg (1000 lbs)

### Pressure injury prevention

**Auralis® Plus**  
SWL\* 454kg (1000 lbs)

**Skin IQ® 1000**  
SWL\* 454 kg (1000 lbs)

### Ceiling lift system

**Maxi Sky® 2 Plus and slings for seated and lateral transfers**  
SWL\* 454 kg (1000 lbs)

### Floor lift system

**Tenor® and slings for seated transfers** SWL\* 320 kg (704 lbs)

### Hygiene

**Carmina®**  
SWL\* 320 kg (704 lbs)

### Lateral transfer and repositioning

**AirPal® Air-Assisted Transfer System**  
SWL\* 454 kg (1000 lbs)  
**Arjo slide sheets**

### VTE prevention

**Flowtron® ACS900 pump with Tri Pulse™ or DVT™ 60L garments**  
- up to 81 cm (32") in calf size

\*SWL: Safe Working Load

# Patient handling solutions

The transfer and repositioning of patients can be time consuming and physically strenuous for caregivers. Without the proper equipment, both caregivers and patients can be at risk of serious injury from static or dynamic forces. Our range of bariatric handling equipment helps facilitate efficient handling of the bariatric patient.

All solutions, including ceiling lifts, floor lifts and lateral transfer devices are specifically designed to enable caregivers to help improve dignity and comfort of larger patients.

## Maxi Sky 2 Plus CEILING LIFT SYSTEM

- 4-point telescopic spreader bar automatically adjusts to the patient's size and position. It can be used in combination with a wide range of bariatric slings to lift, transfer, turn and reposition bariatric patients
- Bariatric slings for seated transfers, lateral transfers, repositioning and limb lifting. Available in various models and sizes in launderable and disposable versions.
- Powered dynamic positioning system (PDPS) allows you to maximise the use of this ceiling lift system for the ergonomic transfer and repositioning of patients of various sizes.

## Tenor FLOOR LIFT SYSTEM

- The curved arc design offers 360° rotation and maximises lifting clearance, with a capacity to lift up to 320 kg/704 lb.
- The 4-point bariatric spreader bar is designed to distribute the patient's weight and reduce the squeezing sensation from the sling, thus enhancing patient comfort.
- Tenor can be operated from the control panel on the mast or with the hand control, which enables the caregiver to stay close to the patient while operating the lifter.
- Optional suspended scale supports an efficient weighing routine.

## AirPal® AIR-ASSISTED PATIENT TRANSFER SYSTEM

With the AirPal, you can transfer patients from one surface to another and reposition within the bed, comfortably and efficiently.

- It supports the patient on a bed of air — an elevating effect created by air flowing through the perforated underside of the AirPal transfer mattress, lifting the patient away from the bed surface.
- As AirPal® can be left under the patient<sup>6</sup>, it can enable fast and comfortable patient repositioning. And the design of AirPal supports International recommendations for using low friction devices to reduce the risk of pressure injury development.<sup>7</sup>
- AirPal is designed to move patients weighing up to 454kg/1000 lbs

# Hygiene

Enhancing dignity and comfort

Addressing the hygiene needs of larger patients can be a key challenge in bariatric care. If appropriate solutions are unavailable, caregivers may be subjected to increased physical overload during patient handling and hygiene activities.

Our bariatric hygiene solutions have been developed to support comfort and dignity for the bariatric patient. They provide caregivers with an ergonomic platform for assisted showering and toileting routines for patients weighing up to 320 kg (705 lb).

## Carmina

### BARIATRIC SHOWER COMMODE CHAIR

- Designed specifically for assisted hygiene routines, showering and toileting for patients.
- Transfer-friendly designed for patients with different mobility levels.
- Available in two models as a bedside commode, a mobile multifunction shower chair, and commode chair.

# Pressure injury prevention

Due to fluid retention and poor circulation, bariatric patients commonly suffer from increased skin fragility, making them more vulnerable to pressure injury and skin tears<sup>3</sup>. We offer support surfaces and microclimate management solutions to help mitigate this risk for patients up to 454kg (1000lb).

## **Auralis® Plus**

### AUTOMATIC ALTERNATING PRESSURE SYSTEM

- The Auralis Plus bariatric mattress replacement is an automatic (self adjusting) dual-therapy system.
- Integrated side bolsters provide on-demand width adjustment to support efficient patient transportation.
- The system's integrated battery back-up helps ensure patient therapy continues even when disconnected from main power supply.

## **Skin IQ® 1000**

### MICROCLIMATE MANAGER

- Skin IQ 1000 utilises Negative Airflow Technology™ to assist in managing the moisture, heat and humidity (microclimate) of the patient's skin.
- Auralis feature dedicated ports for powering the Skin IQ range of coverlets, making it easy to incorporate microclimate control with your chosen support surface therapy.

# Medical beds

## Preserving dignity for bariatric patients

The bed is the centre of care during a hospital stay, providing a platform for patient recovery while helping reduce the risk of patient and caregiver injury. Beds that are able to cater to the size and weight of bariatric patients, without compromising comfort, dignity or desired treatment outcomes, are essential.<sup>4</sup>

Visually consistent with other Arjo hospital beds, the Citadel Plus Bariatric Care System is difficult to distinguish as a bariatric product. This helps preserve the dignity of plus sized patients while delivering the functionality required to manage patients weighing up to 454 kg (1000 lbs).

### **Citadel Plus** BARIATRIC HOSPITAL BED

- Power Drive facilitates one-person transport of patients weighing up to
- 454 kg (1000 lbs).
- Variable width and length offers flexibility to accommodate patients of different sizes and enables ease of transport.
- Integrated weighing scale with digital display.

# VTE prevention

Comfortable, non-invasive and clinically effective

Obesity is associated with a high risk of venous thromboembolism (VTE) – a leading cause of hospital morbidity and mortality for bariatric patients.<sup>5</sup>

Flowtron Active Compression System delivers intermittent pneumatic compression (IPC) a simple, easy-to-use method of circulating blood in the deep veins of the legs, reducing venous stasis and helping to prevent the formation of DVT.

Our Flowtron Tri Pulse and DVT 60L garments are specially designed for bariatric patients with calf size up to 81 cm (32").

## The Flowtron Active Compression System with Compliance Monitoring

### VTE PREVENTION THERAPY

With only one easy-to-use pump, you can deliver both uniform and sequential compression with a variety of garment types. The pump also provides intuitive compliance monitoring that detects garment wear time during intermittent pneumatic compression (IPC).

### FEATURING SMARTSENSE™ 2 WITH COMPLIANCE MONITORING TECHNOLOGY<sup>1</sup>

Simply attach the snap-lock connectors to the Flowtron ACS900 pump and SmartSense automatically detects the type of garment and selects the correct pressure and compression cycle.

### FLOWTRON GARMENTS

Lightweight, breathable and vapour permeable, our garments are designed to help prevent the build-up of heat and moisture.

# Specialist support from Arjo Care

## Helping you get the most out of your care equipment

Ensuring your equipment performs as it should is as much our priority as it is yours. We favour a proactive service approach to help avoid issues before they occur.

Our flexible service plans support you to minimise costly and inconvenient equipment downtime, fulfill compliance requirements, and reduce your total cost of ownership.

# Rental and financing solutions

## The right solution at the right time, with or without capital investment

Having the right solutions in place is essential in order to provide high quality care for your patients whilst minimising risks of your caregiving staff. We offer flexible rental agreements that can be tailored to meet your needs. From a single product to a full package, our bariatric room solutions are available as an ad-hoc rental or a customised rental contract.

# Training

Caregiver efficiency – patient comfort and dignity

We offer product usage training and clinical consultancy to help you design secure and efficient care environments for your patients and staff or get in contact with the Arjo education team [www.arjo.com/en-au/knowledge/arjo-ace-program/arjo-clinical-education-training](http://www.arjo.com/en-au/knowledge/arjo-ace-program/arjo-clinical-education-training).
