

Arjo MOVE

Building better care outcomes

Arjo MOVE® (Mobility Outcome Value Engagement) is a structured, data-driven programme designed to deliver positive measurable outcomes and help healthcare organisations strengthen the foundations of care.

As part of a structured partnership, MOVE programmes assess a facility's policies, processes, equipment, and people. By aligning facility data and current practices with international best-practice standards, the programme helps healthcare providers improve patient mobility and achieve measurable operational, financial, and clinical outcomes. This includes reducing risks and costs related to caregiver physical strain and improving pressure injury performance.

From data to impact:

The Arjo MOVE Process

DEFINE AND MEASURE

We conduct an initial assessment to understand your goals, establish performance baselines, and define measurable outcomes, creating a shared understanding of what success looks like from day one.

ANALYSE & DESIGN

We map current processes, identify improvement opportunities, and co-design optimised workflows and program KPIs. This step turns challenges into a clear, actionable plan, transforming insights into practical solutions.

IMPLEMENT AND GO-LIVE

Together, we implement the agreed processes, support smooth adoption at the bedside, and equip staff through targeted training and peer-to-peer learning. This ensures new practices are effectively embedded across teams.

CONSULT AND SUSTAIN

We monitor progress, evaluate outcomes, and provide ongoing expert guidance to help sustain improvements and support continued progress towards your defined programme goals.
